Contents of Volume 122

Number 1, 7 September 1986

PICKARD, W. F., A Theory of the Saturable Ohmic Channel . . . 1

BORNBUSCH, A. H. and CONNER, W. E., Effects of Self-steered Turn Size and Turn Bias Upon Simulated Chemoklinotactic Behavior . . . 7

JOHNSON, R. B., Human Disease and the Evolution of Pathogen Virulence 19

SASAKI, N., YAMAMURA, H. and MATSUSHIMA, N., Is there a Relation between Bone Strength and Percolation? 25

HOFFMANN, G. W., A Neural Network Model Based on the Analogy with the Immune System 33

VAN TIENDEREN, P. H. and DE JONG, G., Sex Ratio Under the Haystack Model: Polymorphism May Occur 69

LENSKI, R. E. and HATTINGH, S. E., Coexistence of Two Competitors On One Resource and One Inhibitor: A Chemostat Model Based on Bacteria and Antibiotics 83

GRAFEN, A., Split Sex Ratios and the Evolutionary Origins of Eusociality 95

LETTER TO THE EDITOR

LAVIGNE, D. M., INNES, S., WORTHY, G. A. J. and KOVACS, K. M., Metabolic Rate—Body Size Relations in Marine Mammals . . 123

Number 2, 21 September 1986

PEUSNER, L., Hierarchies of Energy Conversion Processes III. Why are Onsager Equations Reciprocal? The Euclidean Geometry of Fluctuation-Dissipation Space 125

WILLS, P. R., Scrapie, Ribosomal Proteins and Biological Information . . 157

Index to Volume 122

ABUGOV, R., Genetics of Darwinian fitness. III. A generalized approach to age structured selection and life history, 311
Adsorptive complex formation may be imitated by protein conformational isomerism; kinetics of protein modification reactions (letter), 247
Age structured selection and life history, a generalized approach to; genetics of Darwinian fitness, 311
AMTHOR, J. S., Evolution and applicability of a whole plant respiration model, 473
Animal-plant pollination systems; fewer pollinator than plant species, 375
Antibiotics and bacteria, a chemostat model based on; coexistence of two competitors on one resource and one inhibitor, 83
ATP synthesis in a two-membrane system; chemiosmotic coupling in cyanobacteria, 409

Bacteria and antibiotics, a chemostat model based on; coexistence of two competitors on one resource and one inhibitor, 83
Bacterial flagellar rotation as a nonequilibrium phase transition, 453
BARVÍK, I. (see SZÖCS, V.), 179
Belovsky's model of optimal moose size, 237
BERDING, C., KEYMER, A. E., MURRAY, J. D. and SLATER, A. F. G., The population dynamics of acquired immunity to helminth infection, 459
BERGQVIST, U. (see LIDÉN, C.), 491
BERMUDEZ, J. and WAGENSBERG, J., On the entropy production in microbiological stationary states, 347
Bio-(chemical) systems, description of excitation transfer and damping in the primary processes of, 179
BISHOP, D. T. and CANNINGS, C., Ordinal conflicts with random rewards, 225
Body size—metabolic rate relations in marine mammals (letter), 123
Bone strength and percolation, is there a relation between?, 25
BORNBUSCH, A. H. and CONNER, W. E., Effects of self-steered turn size and turn bias upon stimulated chemoklinotactic behavior, 7
Branching angles, relation to optimality of four cost principles, 187

CANNINGS, C. (see BISHOP, D. T.), 225
Cell population dynamics during the differentiative phase of tissue development, 205
Chemiosmotic coupling in cyanobacteria: ATP synthesis in a two-membrane system, 409
Chemoklinotactic behavior, simulated, effects of self-steered turn size and turn bias on, 7
Chemostat model based on bacteria and antibiotics; coexistence of two competitors on one resource and one inhibitor, 83
Coexistence of two competitors on one resource and one inhibitor: a chemostat model based on bacteria and antibiotics, 83
COHN, S. A., TIPPIT, D. H. and SPURCK, T. P., Microtubule dynamics in the spindle. II. A thermodynamic and kinetic description, 277
Competitors, two, coexistence on one resource and one inhibitor: a chemostat model based on bacteria and antibody, 83
Conflicts, ordinal, with random rewards, 225
Conformational isomerism, protein, may imitate adsorptive complex formation; kinetics of protein modification reactions (letter), 247
CONNER, W. H. (see BORNBUSCH, A. H.), 7
Cost principles, four, relation of branching angles to optimality for, 187

Cost of sex in hermaphrodite populations with variation in functional sex, 441
COWAN, R. and MORRIS, V. B., Cell population dynamics during the differentiative phase of tissue development, 205
Cyanobacteria, chemiosmotic coupling in; ATP synthesis in a two-membrane system, 409
Cycles, stable limit, a one locus–two allele selection model admitting, 263

Damping in the primary processes of bio-(chemical) systems, description of excitation transfer and, 179
Darwinian fitness, genetics of; a generalized approach to age structured selection and life history, 311
DE JONG, G. (see VAN TIENDEREN, P. H.), 69
Dictyostelium discoideum, a spatial pattern formation model for, 325
Differentiative phase of tissue development, cell population dynamics during, 205
Disease, human, and the evolution of pathogen virulence, 19
Dispersal polymorphisms in subdivided populations, 303
DUFTON, M. J., Genetic code redundancy and its differential influence on the evolution of protein interiors versus exteriors, 231
Dynamics of cell populations during the differentiative phase of tissue development, 205
Dynamics, microtubule, in the spindle; a thermodynamic and kinetic description, 277
Dynamics, population, of acquired immunity to helminth infection, 459
Dynamics, population, theory; back to first principles, 385

Energy conversion processes, hierarchies of; why are Onsager equations reciprocal?; the Euclidean geometry of fluctuation-dissipation space, 125
Entropy production in microbiological stationary states, 347
Enzyme steady-state model, a systematic method for the compilation of the King & Altman graphs of, for manual or computer use, 269
EPSTEIN, R. J., Is your initiator really necessary?, 359
Euclidean geometry of fluctuation-dissipation space; hierarchies of energy conversion processes, 125
Eusociality, evolutionary origins of, and split sex ratios, 95
Evolution and applicability of a whole plant respiration model, 473
Evolution of pathogen virulence, and human disease, 19
Evolution of protein interiors versus exteriors, genetic code redundancy and its differential influence on, 231
Evolutionary origins of eusociality, and split sex ratios, 95
Excitation transfer and damping in the primary processes of bio-(chemical) systems, description of, 179

Flagella rotation, bacterial, as a nonequilibrium phase transition, 453
Fluctuation-dissipation space, Euclidean geometry of; hierarchies of energy conversion processes, 125
FRANK, S. A., Dispersal polymorphisms in subdivided populations, 303

Genetic code redundancy and its differential influence on the evolution of protein interiors versus exteriors, 231
Genetics of Darwinian fitness. A generalized approach to age structured selection and life history, 311
GINZBURG, L. R., The theory of population dynamics. I. Back to first principles, 385
GREFEN, A., Split sex ratios and the evolutionary origins of eusociality, 95

Handedness of parents and sex of progeny, 243
HATTINGH, S. E. (see LENSKI, R. E.), 83
Haystack model and the sex ratio: polymorphism may occur, 69

Helminth infection, the population dynamics of acquired immunity to, 459
Hermaphrodite populations with variation in functional sex, the cost of sex in, 441
Hierarchies of energy conversion processes. Why are Onsager equations reciprocal? The Euclidean geometry of fluctuation-dissipation space, 125

MURRAY, J. D. (see BERDING, C.), 459

Neural network model based on the analogy with the immune system, 33
NITSCHMANN, W. H., Chemiosmotic coupling in cyanobacteria: ATP synthesis in a two-membrane system, 409

Ohmic channel, saturable, a theory of, 1
OLAVARRÍA, J. M., A systematic method for the compilation of the King & Altman graphs of a steady-state enzyme model suitable for manual or computer use, 269
One locus-two allele selection model admitting stable limit cycles, 263
Onsager equations, why are they reciprocal?; hierarchies of energy conversion processes, 125
Ordinal conflicts with random rewards, 225

Parents, handedness of, and sex of progeny, 243
Parthenogenesis, males and the maintenance of anisogamous sex, 421
Pathogen virulence, evolution of, and human disease, 19
Pattern formation model for *Dictyostelium discoideum*, 325
Percolation, is there a relation between bone strength and?, 25
PEREZ-GARCIA, C. (see JOU, D.), 453
PEUSNER, L., Hierarchies of energy conversion processes III. Why are Onsager equations reciprocal? The Euclidean geometry of fluctuation-dissipation space, 125
Phase transition, nonequilibrium, bacterial flagellar rotation as a, 453
Phase wave propagation in relation to tactic responses by the plasmodium of *Physarum polycephalum*, 339
Physarum polycephalum, propagation of phase wave in relation to tactic responses by the plasmodium of, 339
PICKARD, W. F., A theory of the saturable ohmic channel, 1
Plant, whole, respiration model, and evolution, 473
Plant-animal pollination systems; fewer pollinator than plant species, 375
Plasmodium of *Physarum polycephalum*, propagation of phase wave in relation to tactic responses by, 339
Pollination systems, plant-animal; fewer pollinator than plant species, 375
Polymorphism may occur; sex ratio under the haystack model, 69
Polymorphisms, dispersal, in subdivided populations, 303
Polyploidy and asexual reproduction, on the relationship between (letter), 493
Popluation dynamics of acquired immunity to helminth infection, 459
Population dynamics of cells during the differentiative phase of tissue development, 205
Population dynamics, theory; back to first principles, 385
Populations, hermaphrodite, with variation in functional sex, the cost of sex in, 441
Populations, subdivided, dispersal polymorphisms in, 303
Predators, terrestrial, the optimum search speed of, when feeding on sedentary prey; a predictive model, 401
Predator-prey system with three trophic levels, switching effect on the stability of, 251
Prey, sedentary, the optimum search speed of terrestrial predators when feeding on; a predictive model, 401
Prey-predator system with three trophic levels, switching effect on the stability of, 251
Progeny, sex of, and handedness of parents, 243

Propagation of phase wave in relation to tactic responses by the plasmodium of *Physarum polycephalum*, 339
Protein interiors versus exteriors, genetic code redundancy and its differential influence on the evolution of, 231
Protein modification reaction kinetics: protein conformational isomerism may imitate adsorptive complex formation (letter), 247
Proteins, ribosomal, biological information and scrapie, 157
Radiation, UV-A, of clinical relevance is not emitted by visual display terminals (letter), 491

RAKITZIS, E. T., Kinetics of protein modification reactions: protein conformational isomerism may imitate adsorptive complex formation (letter), 247
Random rewards, ordinal conflicts with, 225
